| 4     | Opis taksacyjny .....                                                                                                    | 17 |
| 5     | Rejestr działek leśnych i gruntów do zalesienia wg właścicieli .....                                                     | 43 |
| 6     | Wykaz właścicieli .....                                                                                                  | 65 |
| 7     | Wykaz działek .....                                                                                                      | 66 |
| 8     | Wykaz rozbieżności i zmian powierzchni leśnej w stosunku do rejestru gruntów .....                                       | 71 |
| 8.1   | Wykaz rozbieżności geodezyjnych .....                                                                                    | 72 |
| 9     | Wykaz skrótów .....                                                                                                      | 75 |

# UPROSZCZONY PLAN URZĄDZENIA LASU

Obrębu ewidencyjnego **BAJKI STARE**

Położonego w gminie **Trzcianne** powiat **Moniecki** województwo **Podlaskie**

2023.01.01 r. -2032.12.31 r.

## I Zestawienie powierzchni

Według stanu na 15.04.2022 r.

Ogólna powierzchnia opracowania ..... **161,6474 [ha]**

W tym:

1) Powierzchnia leśna zgodna z ewidencją gruntów i budynków [ha] ..... **161,6474 [ha]**

Powierzchnia lasów [ha] ..... **161,6474 [ha]**

Według grup kategorii użytkowania

- Gruntów zalesionych..... **157,1303 [ha]**

- Gruntów niezalesionych..... **4,5171 [ha]**

W tym: do odnowienia ..... **1,5860 [ha]**

- Gruntów związanych z gospodarką leśną [ha] ..... **0,0000 [ha]**

2) Powierzchnia gruntów spełniających wymogi ustawy o lasach

a nie ujętych w ewidencji gruntów i budynków [ha] ..... **0,0000 [ha]**

3) Powierzchnia gruntów przewidzianych do zalesienia [ha] ..... **0,0000 [ha]**

## II Zestawienie zadań na lata od 2023.01.01r. do 2032.12.31r.

### II.1 POZYSKANIE DREWNA W ILOŚCI NIE WIĘKSZEJ NIŻ

1) Etat cięć w użytkowaniu rębnym

**21284 m<sup>3</sup>** grubizny brutto (**17734 m<sup>3</sup>** grubizny netto)

2) Powierzchniowy etat cięć w użytkowaniu przedrębnym ..... **59,0421 [ha]**

o orientacyjnej miąższości:

**2039 m<sup>3</sup>** grubizny netto

# 1 OPIS OGÓLNY

## 1.1 Nadzór

Nadzór nad gospodarką leśną, w chwili sporządzenia UPUL sprawuje Starosta Moniecki

## 1.2 Warunki przyrodnicze

Lasy objęte uproszczonym planem urządzenia lasu położone są w:

Krainie: II-Mazursko-Podlaska

Mezoregionie: II-14 Wysoczyzny Białostockiej

Dla obszaru całej gminy przyjęto następujące typy drzewostanów oraz ramowe składki odnowień dla wyodrębnionych podczas inwentaryzacji siedliskowych typów lasu:

Tab. 1Zestawienie typów drzewostanu i ramowych składów odnowień

| TSL  | TD      | Orientacyjny skład gatunkowy [%] | Gatunki domieszkowe [%]  |
|------|---------|----------------------------------|--------------------------|

Js - ze względu na masowe występowanie zespołu chorobowego zamierania jesionu można zastępować w składzie gatunkowym jesion Ol, Db, Św, Wz, Brz, Jw.

Na powierzchniach zagrożonych przez pędraki dopuszcza się odnowienia z gatunków lekkonasiennych na wszystkich siedliskach.

Dopuszcza się w odnowieniach zastępowanie gatunków wymienionych w powyższej tabeli innymi cennymi gatunkami rodzimymi odpowiednimi dla danego siedliska.

Dopuszcza się różnice do 20% w powyższych orientacyjnych składach gatunkowych, zwłaszcza na korzyść gatunków liściastych.

Dopuszcza się stosowanie innych TD od wymienionych w tabeli w przypadku gdy w terenie zostanie stwierdzony inny model drzewostanu odpowiedni dla siedliska.

Niewielkie powierzchnie można odnawiać jednym gatunkiem, odpowiednim do siedliska.

Materiał używany do zalesień i odnowień powinien spełniać wymogi Ustawy z dnia 7 czerwca 2001 roku o leśnym materiale rozmnożeniowym (t.j. Dz. U. 2019 r. poz. 1097).

Zestawienie sumarycznej powierzchni typów siedliskowych lasu (TSL):

| TSL  | Powierzchnia [ha] |
|------|-------------------|
| BMŚW | 149,6074          |
| BŚW  | 11,4900           |
| OL   | 0,5500            |

### 1.3 Miąższość dopuszczalna do pozyskania

Określone Rozporządzeniem Ministra Środowiska z dnia 12 listopada 2012 r. w sprawie szczegółowych warunków i trybu sporządzania planu urządzenia lasu, uproszczonego planu urządzenia lasu oraz inwentaryzacji stanu lasu (Dz. U. 2012 poz. 1302) minimalne wieki wyrębu wynoszą:

| Gatunek | Wiek rębności | Gatunek | Wiek rębności | Gatunek | Wiek rębności | Gatunek | Wiek rębności |
|---------|---------------|---------|---------------|---------|---------------|---------|---------------|
| SO      | 80            | BRZ     | 60            | DG      | 80            | JRZ     | 40            |

#### 1.3.1 Maksymalne miąższości do pozyskania w użytkowaniu rębnym

Na podstawie wyżej określonych minimalnych wieków wyrębu obliczono etaty oraz określono maksymalną miąższość do pozyskania w użytkowaniu rębnym. Maksymalny etat został wyliczony zgodnie z załącznikiem 5 zarządzenia DGLP nr 49 z 2016 r. punkt 3.1.6.1

Tab. 2 Etaty rębne

| Etat z ostatniej klasy wieku | Etat z 2-ch ostatnich klas wieku | Etat wg potrzeb hodowlanych z uwzględnieniem przebudowy drzewostanu | Etat przyjęty | Pozostałe użytki rębne nieobjęte etatem | Maksymalna miąższość możliwa do pozysk. w użytk. rębnym (kol.4+kol.5) |
|------------------------------|----------------------------------|---------------------------------------------------------------------|---------------|-----------------------------------------|-----------------------------------------------------------------------|

#### 1.3.2 Maksymalne miąższości do pozyskania w użytkowaniu przedrębnym

W użytkowaniu przedrębnym przewiduje się pozyskanie w wysokości

- **2395** m<sup>3</sup> grubizny brutto
- **2039** m<sup>3</sup> grubizny netto

na powierzchni **59,0421** ha.

Wielkość ta wynika z sumy masy i powierzchni wskazań gospodarczych konkretnych drzewostanów projektowanych do zabiegów pielęgnacyjnych (CP-P, TW, TP) i stanowi orientacyjną wielkość miąższości wynikającą z właściwie wykonanych zabiegów hodowlanych na przewidzianej do tych zabiegów powierzchni. W uzasadnionych przypadkach, wynikających z potrzeb hodowli i użytkowania lasu oraz innych aspektów

przyrodniczych, możliwe jest zwiększenie wskaźników intensywności użytkowania przedrębego („Wytyczne do sporządzania projektów uproszczonych planów urządzenia lasu”, rozdział 3.1.6.2 „Zasady ustalania orientacyjnej miąższości możliwej do pozyskania w użytkowaniu przedrębnym”) wykazanego w niniejszym opracowaniu do wielkości nieprzekraczającej 20% miąższości drzewostanu (pododdziału) wskazanej w uproszczonym planie urządzenia lasu.

Nie należy pozostawiać drzewostanu bez zabiegów rębnych, gdyż w dłuższej perspektywie prowadzi to do deprecjacji surowca drzewnego, powodując wymierne straty, szczególnie w miejscach o podwyższonej wilgotności gleby. Ponadto pozostawienie zbyt silnego zwarcia prowadzi do zamierania młodych pokoleń rozwijających się w dnie lasu i utrudnia stworzenie dogodnych warunków dla odnowienia naturalnego. Wobec tego, w miejscach, gdzie młode pokolenie występuje na dużej powierzchni, należy prowadzić bardziej intensywne cięcia.

Nie należy poprzez cięcia prowadzić do zbyt dużego rozświetlenia dna lasu, w przypadku, gdy nie rozwija się jeszcze młode pokolenie. Zbytne rozświetlenie dna lasu doprowadzić może do zadarnienia lub silnego zachwaszczenia utrudniając tym samym rozwój nalotów i podrostów, co przełoży się to w przyszłości na znaczny wysiłek w wyprowadzeniu dobrego jakościowo młodnika i następnie drzewostanu.

W miejscach z zaplanowanym usuwaniem przestojów zaleca się pozostawienie części z nich w charakterze nasienników i ochrony młodych drzew. Należy jednak starannie selekcjonować takie drzewa, by były w dobrej kondycji i wolne od chorób i owadów.

W wydzieleniach, gdzie zanotowano stosunkowo duży udział martwego drewna tj. drzew martwych, zamierających i atakowanych przez owady (wydzielający się posusz) prowadzić cięcia sanitarne przekraczające wyznaczony etat (martwe drewno nie zaliczono do etatu w użytkowaniu rębnym i przedrębnym). W celu nie doprowadzenia do wylesienia tych wydzieli należy eliminować ogniska grzybowe i owadzie.

W przypadku wyliczenia zbyt niskiego etatu pozyskania na pojedynczej działce (brak równomierności rozłożenia masy w wydzielaniu np. przestaje lub opisane gatunki, jako „miejscami” (MJS) ze starszych klas wieku) decyzje o pozyskaniu podejmuje organ nadzorujący. W takich przypadkach dopuszcza się pozyskanie większe od wyliczonego matematycznie przy założeniach racjonalnej i zrównoważonej gospodarki leśnej. Na przykład, przy opisanym d-stanie w III kl wieku i działce 0,01 ha etat jest niski (wynosi na 10 lat 1 m<sup>3</sup>), ale na działce tej rosną dwie So 120 l o łącznej masie 6m<sup>3</sup>. W takim przypadku dopuszcza się ich pozyskanie i przekroczenie zaplanowanego etatu dla działki.

Jednocześnie zwraca się uwagę, że planowany etat jest maksymalnym do pozyskania na cały okres obowiązywania planu, stanowi wskazówkę, a nie wytyczną w planowaniu. Tym samym rozumie się przez to brak konieczności wykonywania etatu pozyskania, jako całości, jak również w poszczególnych wydzielaniach. Decyzja o pozyskaniu masy należy do władającego gruntem i tym samym w przypadku stwierdzenia braku potrzeby pozyskania wyliczonej masy z wydzielania nie ma takiego obowiązku. Właściciel może pozostawić zapas na kolejny okres gospodarczy.

W rębniach zupełnych, w stosowaniu cięć można stosować poszczególne działki ewidencyjne jak działki zrębowe.

**Tab. 3 Miąższość drzewostanów zaprojektowanych do użytkowania przedrębego**

| Miąższość drzewostanów projektowanych do użytkowania przedrębego | Spodziewany przyrost bieżący | Miąższość planowana do pozyskania | Stosunek procentowy (3:1)*100 | Stosunek procentowy (3:2)*100 |
|------------------------------------------------------------------|------------------------------|-----------------------------------|-------------------------------|-------------------------------|

## 1.5 Ochrona lasu

### 1.5.1 Podział lasów na kategorie ochronności

W obrębie objętym opracowaniem nie występują lasy ochronne.

### 1.5.2 Stan sanitarny

Stan zdrowotny drzewostanów z nielicznymi wyjątkami przedstawia się dobrze. Największym zagrożeniem dla drzewostanów są gradacje owadzie i kłęski klimatyczne.

W przypadku pewnych różnic pomiędzy istniejącym składem gatunkowym a założonym należy, w miarę możliwości dążyć do ich dostosowania do przyjętego TD.

### 1.5.3 Ochrona przyrody

Zinwentaryzowane gatunki chronionych roślin wpisane zostały w sekcji „osobliwości przyrodnicze” pod kodem 14 (płat roślinności) wraz z podaniem gatunku. Zinwentaryzowane gatunki fauny zostały wpisane w sekcji „informacje różne”

Wytyczne do wykonania zabiegów:

Na wszystkich terenach prace leśne prowadzić w sposób zapewniający jak najmniejszy uszczerbek w gatunkach chronionych stwierdzonych w poszczególnych wydzieleniach. Pozostawiać drzewa z gniazdami, dziuplaste zasiedlone itd.

Przy prowadzeniu prac leśnych, gdy zachodzi potrzeba wyznaczania szlaków zrywkowych udostępniających las, wyznaczać je w taki sposób, który spowoduje przemyślane poruszanie się po drzewostanie, ograniczając niszczenie gleby, roślin runa i kaleczenie drzew. Ważnym jest, aby po zakończeniu prac szlaki zrywkowe zabezpieczyć przed erozją gruntu i przekształcaniem w rynny odprowadzające wodę.

Zaleca się, aby podczas prac z zakresu pozyskania drewna zwracać uwagę na ochronę naturalnego odnowienia, pozostawiać drzewa z gniazdami ptaków wraz z osłoną drzewostanu o pow. 0,02 ha. Zaleca się również w wydzieleniach, w których stwierdzono występowanie roślin chronionych, w celu ochrony płatów roślin, wykonanie zabiegów gospodarczych na początku lub końcu okresu wegetacyjnego, najlepiej przy pełnej pokrywie śnieżnej. Należy również zachować różnorodność i bogactwo krajobrazu poprzez pozostawienie w stanie nienaruszonym śródleśnych łąk, polan czy różnego rodzaju nieużytków będących często ostoją chronionych gatunków roślin i miejscem bytowania zwierzęcy.

W celu ochrony organizmów związanych z martwym drewnem należy wskazać na systematyczne pozostawianie w lesie martwych drzew, które są środowiskiem życia tych organizmów, w ilości, niepowodującej narażania drzewostanów na opanowanie przez szkodniki wtórne lub choroby grzybowe. Pozostawianie rozkładającego się drewna wpłynie dodatnio na intensyfikację ochrony różnorodności biologicznej w ekosystemach leśnych.

Realizując zadania gospodarcze należy kierować się zasadą trwałości lasu oraz uwzględniać funkcje ochronne. Ważne jest też realizowanie zadań gospodarczych w sposób mało uciążliwy dla ekotopu i biocenozy leśnej.

Szczególny nacisk położyć trzeba na utrzymanie wszystkich funkcji spełnianych przez las oraz poprawienie biologicznej różnorodności lasów, a co za tym idzie zwiększenie ich naturalnej odporności na możliwość powstania szkód biotycznych i abiotycznych. Ten cel można osiągnąć między innymi przez:

- Pozostawianie w lasach drzew o imponujących wymiarach,
- Nie ingerowanie w małe zbiorniki, ciekł wodne i tereny źródłiskowe, pozostawianie wzdłuż zbiorników, cieków wodnych i na terenach źródłiskowych rosnącej tam roślinności drzewiastej; w przypadku powstania wylesienia teren taki należy w krótkim czasie odnowić,
- Pozostawianie występujących w lesie naturalnych nieużytków takich jak bagna, mszary, torfowiska, itp. wraz z fauną i florą,
- Dostosowanie składu gatunkowego odnowień do lokalnych warunków mikrosiedliskowych,
- Zaniechanie, przy realizacji cięć pielęgnacyjnych, stosowania cięć schematycznych; należy tworzyć rozmieszczone nierównomiernie biogrupy drzew stabilizujące drzewostan,

- Odnowienia i podsadzenia należy prowadzić pod kątem dostosowania składu gatunkowego młodego pokolenia do potencjalnych możliwości produkcyjnych siedlisk,
- Nie prowadzenie melioracji wodnych w sposób grożący wysuszeniem naturalnych terenów

**We wszystkich pracach prowadzonych w oparciu o UPUL stosować zapisy Rozporządzenia Ministra Środowiska z dnia 18 grudnia 2017 r. w sprawie wymagań dobrej praktyki w zakresie gospodarki leśnej DZ.U. 2017. Poz. 2408.**

We wszystkich pracach stosować zapisy ustawy z dnia 16 kwietnia 2004 r. o ochronie przyrody w zakresie zakazów i ograniczeń co do ochrony gatunkowej a także w stosunku do pomników przyrody występujących na gruntach ujętych w pUPUL bądź ich sąsiedztwie.

Poprzez utrzymanie stałego pokrycia roślinnością leśną utrzymywać stałe korytarze migracji.

#### 1.5.4 Ochrona przeciwpożarowa

W zakresie ochrony przeciwpożarowej obowiązki właścicieli lasów określają:

- Ustawa o lasach z dnia 28 września 1991 roku (t.j. Dz. U. z 2021 r. poz 1275)
- Ustawa o ochronie przeciwpożarowej z dnia 24 sierpnia 1991 roku (t.j. Dz. U. z 2021 r. poz. 869) i wydanymi na ich podstawie przepisami wykonawczymi:
  - Rozporządzenie Ministra Spraw Wewnętrznych i Administracji z dnia 7 czerwca 2010 r. w sprawie ochrony przeciwpożarowej budynków, innych obiektów budowlanych i terenów (Dz. U. 2010 nr 109 poz. 719 z późniejszymi zmianami)
  - Rozporządzenie Ministra Spraw Wewnętrznych i Administracji z dnia 11 stycznia 2019 r. (Dz.U. 2019 poz.67) zmieniające rozporządzenie w sprawie ochrony przeciwpożarowej budynków, innych obiektów budowlanych i terenów
  - Rozporządzenie Ministra Środowiska z dnia 22 marca 2006 r. (Dz. U. 2006 nr 58 poz. 405 z późniejszymi zmianami) w sprawie szczegółowych zasad zabezpieczania przeciwpożarowego lasów
  - Rozporządzenie Ministra Środowiska z dnia 13 lipca 2015 r. (Dz. U. 2015 poz. 1070) zmieniające rozporządzenie w sprawie szczegółowych zasad zabezpieczenia przeciwpożarowego lasów

Z uwagi na fakt, że lasy w zarządzie właściwego terytorialnie Nadleśnictwa oraz lasy będące przedmiotem opracowania sąsiadują ze sobą, bądź są oddalone o kilkaset metrów wszelkie dane odnośnie zagrożenia pożarowego, jak również sposobu postępowania na wypadek pożaru są analogiczne.

Lasy właściwego terytorialnie Nadleśnictwa zaliczone zostały do I kategorii zagrożenia pożarowego, w związku z powyższym taką samą kategorię zagrożenia pożarowego posiadają lasy będące przedmiotem opracowania. Działania prewencyjne i ochronne w nadleśnictwach odnośnie zabezpieczenia przeciwpożarowego z uwagi na sąsiedztwo obejmują wszystkie lasy bez względu na własność. Wyposażenie techniczne i logistyczne nadleśnictw wykorzystywane jest również do wczesnego wykrywania i likwidowania pożarów w lasach innej własności.

## **1.6 Zawartość UPUL**

W skład uproszczonego planu urządzenia lasu wchodzi następujące części:

1. Operat
2. Mapa gospodarcza lasów

## 2 ZESTAWIENIE POWIERZCHNI I MIĄŻSZOŚCI GATUNKÓW PANUJĄCYCH W KLASACH I PODKLASACH WIEKU WEDŁUG GŁÓWNYCH FUNKCJI LASU

| RETENCJA  | retencja                        |
| INNE WYL  | inne wylesienie                 |
| BUD INNE  | inne tereny zabudowane          |
| URZ WOD   | inne urządzzenia melioracji wod |
| ROWY      | rowy                            |
| LINIE     | linie niestanowiące podziału    |
| PAS GRAN  | pas graniczny                   |
| PAS PPOŻ  | pas przeciwpożarowy             |
| DROGI L   | drogi leśne                     |
| KOLEJ L   | kolejka leśna                   |
| L ENER    | linia energetyczna              |
| L TELEK   | linia telekomunikacyjna         |
| SZK LEŚNA | szkółka leśna                   |
| SKŁAD DR  | składnica drewna                |
| PARKING L | parking                         |
| TURYST    | miejsce turystyczne             |
| ZWIERZ    | zwierzyniec                     |
| ARBOR     | arboretum                       |

## RODZAJE DRZEWOSTANU

|         |                             |
|---------|-----------------------------|
| DRZEW   | drzewostan                  |
| Z PIĘTR | drzewostandwupietrowy       |
| W PIĘTR | drzewostan wielopietrowy    |
| KO      | klasa odnowienia            |
| KDO     | klasa do odnowienia         |
| SP      | d-stan o strukt przerębowej |

## POWIERZCHNIE NIESTANOWIĄCE WYDZIELEŃ (PNSW)

|         |                             |
|---------|-----------------------------|
| BAGNO   | bagno                       |
| D LUKA  | dolesiona luka              |
| D PRZEZ | dolesione przerzedzenie     |
| GNIA    | gniazdo nieodnowione        |
| KĘPA    | kępa                        |
| LUKA    | luka                        |
| POL ŁOW | poletko łowieckie           |
| REMIZA  | remiza                      |
| SZK     | szkółka                     |
| OD GNIA | gniazdo odnowione           |
| GNIA CZ | gniazdo częściowe           |
| OD G CZ | gniazdo częściowe odnowione |

## RODZAJ PIĘTRA

|         |                                |
|---------|--------------------------------|
| DRZEW   | warstwa drzew                  |
| PODR    | podrost                        |
| PODR II | podrost o charakterze II piętr |
| NAL     | nalot                          |
| PODS    | podsadzenia pod osłoną         |
| PODSZ   | podszyt                        |
| PRZES   | przestoje, nasienniki i przedr |
| IP      | piętro pierwsze                |
| IIP     | piętro drugie                  |
| ZADRZEW | zadrzewienie                   |
| PLANT   | plantacja choinkowa            |
| ZAKRZEW | zakrzewienie                   |
| SAMOS   | samosiew                       |

## TYP POKRYWY

|      |                      |
|------|----------------------|
| MSZ  | mszysta- kobierce    |
| MSZC | mszysta- czernicowa  |
| NAGA | naga                 |
| SZAD | silnie zadarniona    |
| SZCH | silnie zachwaszczona |
| ŚCIO | ściota               |
| ZAD  | zadarniona           |
| ZIEL | zielna               |

## ZABIEGI

|          |                                                      |
|----------|------------------------------------------------------|
| AGROT    | specjalne zabiegi agrotechniczne                     |
| CP       | czyszczenia późne                                    |
| CP-P     | pozyskanie w CP                                      |
| CW       | czyszczenia wczesne                                  |
| DRZEW    | uprzątk. drzew na pow. nieleśnej                     |
| IA       | rębnia zupełna wielkopowierzchniowa                  |
| IB       | rębnia zupełna pasowa                                |
| IC       | rębnia zupełna smugowa                               |
| IIA      | rębnia częściowa wielkopowierzchniowa                |
| IIAU     | rębnia częściowa wielkopowierzchniowa -uprzątające   |
| IIB      | rębnia częściowa pasowa                              |
| IIBU     | rębnia częściowa pasowa -uprzątające                 |
| IIC      | rębnia częściowa smugowa                             |
| IICU     | rębnia częściowa smugowa -uprzątające                |
| IID      | rębnia częściowa gniazdowa                           |
| IIDU     | rębnia częściowa gniazdowa -uprzątające              |
| IIIA     | rębnia gniazdowa zupełna                             |
| IIIAU    | rębnia gniazdowa zupełna -uprzątające                |
| IIIB     | rębnia gniazdowa częściowa                           |
| IIIBU    | rębnia gniazdowa częściowa -uprzątające              |
| IVA      | rębnia stopniowa gniazdowa                           |
| IVAU     | rębnia stopniowa gniazdowa -uprzątające              |
| IVB      | rębnia stopniowa brzegowo-smugowa                    |
| IVBU     | rębnia stopniowa brzegowo-smugowa -uprzątające       |
| IVC      | rębnia stopniowa brzegowo-smugowa                    |
| IVCU     | rębnia stopniowa brzegowo-smugowa -uprzątające       |
| IVD      | rębnia stopniowa gniazdowa udoskonalona              |
| IVDU     | rębnia stopniowa gniazdowa udoskonalona -uprzątające |
| MA-FIT   | fitomelioracje                                       |
| MA-MIN   | nawożenie mineralne                                  |
| MA-REG   | lokalna reg.stosunków wodnych                        |
| ODN-HAL  | odnowienie halizn                                    |
| ODN-IIP  | wprowadzenie II piętra                               |
| ODN-LUK  | odnowienia luk                                       |
| ODN-PLAN | odnow.plant.szybkorosnących                          |
| ODN-POR  | zalesienia pow.porolnych                             |
| ODN-ZŁOŻ | odnow.w rębniach złożonych                           |
| ODN-ZRB  | odnowienie zrębów                                    |
| PIEL     | pielęgnowanie gleby                                  |
| PŁAZ     | uprzątkanie płazowin                                 |
| PODSZ    | wprowadzanie podszytów                               |
| POPR     | poprawki i uzupełnienia                              |
| PRZEST   | uprzątk.nasienników, przestojów                      |
| TP       | trzebież późna                                       |
| TW       | trzebież wczesna                                     |
| V        | rębnia przerębowa                                    |
| ZAL-NIEU | zalesienia nieużytków                                |
| Z-PIELD  | pielęgn.drzew w zadrzewieniach                       |
| Z-PIELK  | pielęgn.krzewów w zadrzew.                           |
| Z-SADZD  | sadzenie drzew do zadrzewień                         |
| Z-SADZK  | sadzenie krzewów do zadrzewień                       |
